

Major expansion projects add traffic capacity to the roadway system in several ways:

- **Construction of new roads** where none existed before.
- **Major widenings**, or adding through lanes to increase the traffic capacity of a roadway, including any bridges.
- **Construction of new interchanges** where none existed before to either provide new access to a freeway or replace an existing, at-grade intersection.
- **Interchange modifications** typically increase traffic capacity, upgrade to new design standards, and make other changes to reduce crashes. These projects may also incorporate widening of overpass bridges and adding turn lanes at the intersections of ramps and surface streets.
