FOR IMMEDIATE RELEASE

Air Quality Alert Issued for June 3-4 in Central Ohio Air Pollution Levels Expected to be Unhealthy for Sensitive Groups

(COLUMBUS – June 3, 2017) – The Mid-Ohio Regional Planning Commission (MORPC) is issuing an Air Quality Alert for Sunday, June 4. The region – Delaware, Fairfield, Franklin, Knox, Madison, and Licking counties – is likely to experience ground-level ozone pollution levels that are Unhealthy for Sensitive Groups on the national Air Quality Index (AQI) scale. Sunday's AQI is forecasted to be 108 AQI and is the second Alert of the season. MORPC previously issued an Air Quality Alert for today and the AQI is forecasted to be 101 AQI.

An approaching low pressure system will produce moderate southwesterly winds in central Ohio, transporting regional pollutants into the Columbus area. In addition, mostly sunny skies and temperatures in the mid-80s will enhance ozone formation. Furthermore, high pollutant carryover from the previous days will keep AQI levels Unhealthy for Sensitive Groups.

MORPC uses the national AQI scale to inform the public about daily ozone and particle pollution levels in Central Ohio. The AQI scale runs from 0-300 – the higher the AQI value, the greater the health concern. When levels reach above 100, air quality is considered to be Unhealthy for Sensitive Groups and MORPC issues an Air Quality Alert to the public.

Active children, the elderly, and people with asthma and COPD are more likely to suffer an increase in the number and severity of symptoms during an Air Quality Alert. To decrease the potential for health issues, sensitive groups of people are urged to limit prolonged outdoor activity or plan outdoor activities for the morning. Those who are experiencing breathing difficulties should consult with their doctor.

On Air Quality Alert days, MORPC recommends taking actions to improve air quality. When everyone pitches in, our communities breathe better air.

- Travel by carpooling, combining trips, riding the bus, bicycling, or walking to nearby outdoor activities and destinations. Join the Commuter Challenge in June to commute, log and win. Participants who log sustainable commutes will have the chance to win daily and grand prize drawings. Register today at MakeYourMilesMatter.com.

2-2-2

- Turn off your engine instead of idling your vehicle to cut down on vehicle emissions.
- Avoid refueling your vehicle, or wait until dusk to refuel your vehicle. Filling up your tank when the daytime heat has diminished helps to reduce harmful ground-level ozone pollution.
- Avoid topping off your tank at the gas station. Spilled gasoline pollutes the air when it evaporates.
- Avoid mowing your lawn on an Air Quality Alert day. Longer grass in your yard is good for the air, as well as the lawn.
