Air quality conditions in June 2019 were worse than those observed in June 2018 and better than those observed in June 2017. While average temperatures were slightly below normal for the month, temperatures increased near the end of June. On June 28, calm-to-light southwesterly winds transported regional pollutants into the Columbus region, and sunny skies and temperatures over 90°F enhanced ozone formation. These conditions resulted in a daily AQI level of 93 for ozone pollution.

Daily Maximum AQI for June 2019

In June 2019, AQI levels in the Columbus region were Good on 19 days and Moderate on 11 days. No Unhealthy for Sensitive Groups days were observed this month. One Air Quality Alert was issued on
