

## Appendix A- Inventory of Bridge Conditions

Bridges can present significant safety challenges. As mentioned in chapter 3. The Regional Transportation System, CORPO mapped bridge conditions in each of the CORPO member counties utilizing data from ODOT. This helps local governments determine which bridges to make a priority in terms of maintenance and safety.

The National Bridge Inventory (NBI) is a database compiled by FHWA with information on all bridges and tunnels in the US that have roads passing above or below them. The NBI includes a structural evaluation of deck, superstructure, substructure, and culvert on a 0-9 scale. Bridges or tunnels scoring between 0-4 on this scale likely need replacement, scoring 5-6 represent structures that likely need maintenance, and scores above 6 reflect structures in good condition.

The following pages include the list of bridges and condition ratings for all seven of the CORPO member counties. The list also includes the structural file number (ODOT), county, feature the bridge traverses, location, year built, last inspection date and finally the rating for each bridge.

## Appendix A: Inventory of Bridge Conditions

Sorted by County and SFN

SFN	County	Feature Traversed	Location	Year Built	Inspection Date	General Appraisal	Rating
